## MAC Address

- A media access control address (MAC address) is a unique identifier assigned to a network interface controller (NIC) for use as a network address in communications within a network segment.
- MAC Addresses are unique **48-bits** hardware number of a computer.
- Represented as:
  - **68-7F-74-12-34-56**

## IP Address

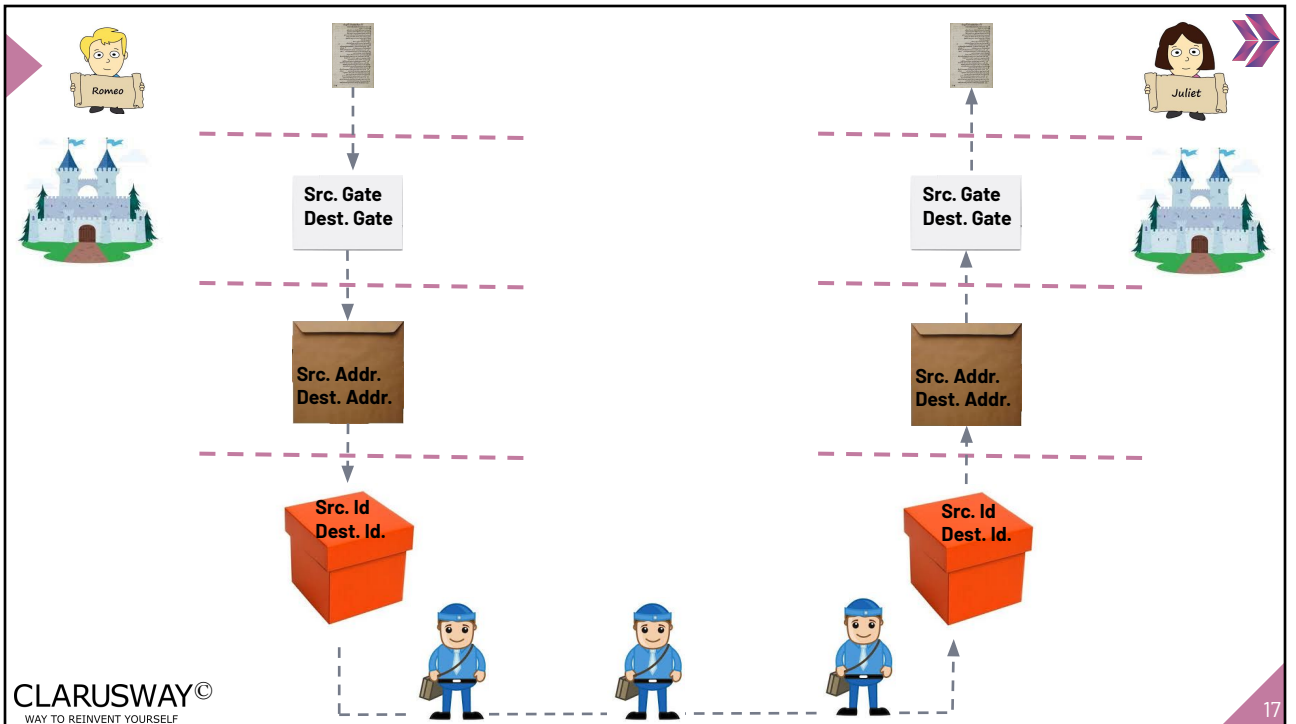

- IP address consists of **32 bits** or **4 bytes** or **4 octets**
- Represented as:
  - 54.164.151.235 or
  - 00110110.10100100.10010111.11101011 or
  - 66.A4.97.EB

## Transmission Control Protocol (TCP) Header

20-60 bytes

# IP header

43

## Ethernet at the Data Link Layer

### Ethernet Frames

- Encapsulated data defined by the Network Access layer is called an Ethernet frame
- The Ethernet frame structure is defined in the IEEE 802.3 standard
